COMPENG 2SH4 Project – Statement of Contribution

Your Group Name ___Error-404-partner-not-found_____

Your Name ____Bishal Sarker_____

Your Team Member's Name _____Zunairah Hasan_____

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

    - I worked on iterations 1A and 3 (feature 1 and feature 3), and am completing the peer evaluation and statement of contributions
    - I worked mostly on the GameMechs, project, and objPos files, completing most the functions in there

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

    - My partner worked on iterations 1B, 2A, 2B, and 3 (feature 2)
    - My partner worked on all implementation concerning the arrayList, tested out all code in the sub-folder with the testing file,
    - My partner also worked on the random food generation functions and edits throughout the code; she also made the files to run with the code

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

    - My experience was great! My partner was proactive and took initiative in a lot of the code. We also communicated throughout the process to make sure that we were on the same page to efficiently work on the multiple parts concurrently, which is something that worked for our project. Another thing that worked was our willingness to work as a team, as we met throughout the project timeline in meetings and other ways to collaborate properly and help each other with our problems.
